03. PromptGuard

AI Application Security & Prompt Injection Detection Platform

Concept: A security platform that helps developers test AI-powered applications against unsafe prompts, prompt injection, and sensitive-data leakage.

Features

- Prompt security testing.
- Prompt injection test cases.
- Sensitive-data detection.
- Risk scoring.
- Security reports.
- Test history and comparison.
- Custom security rules.

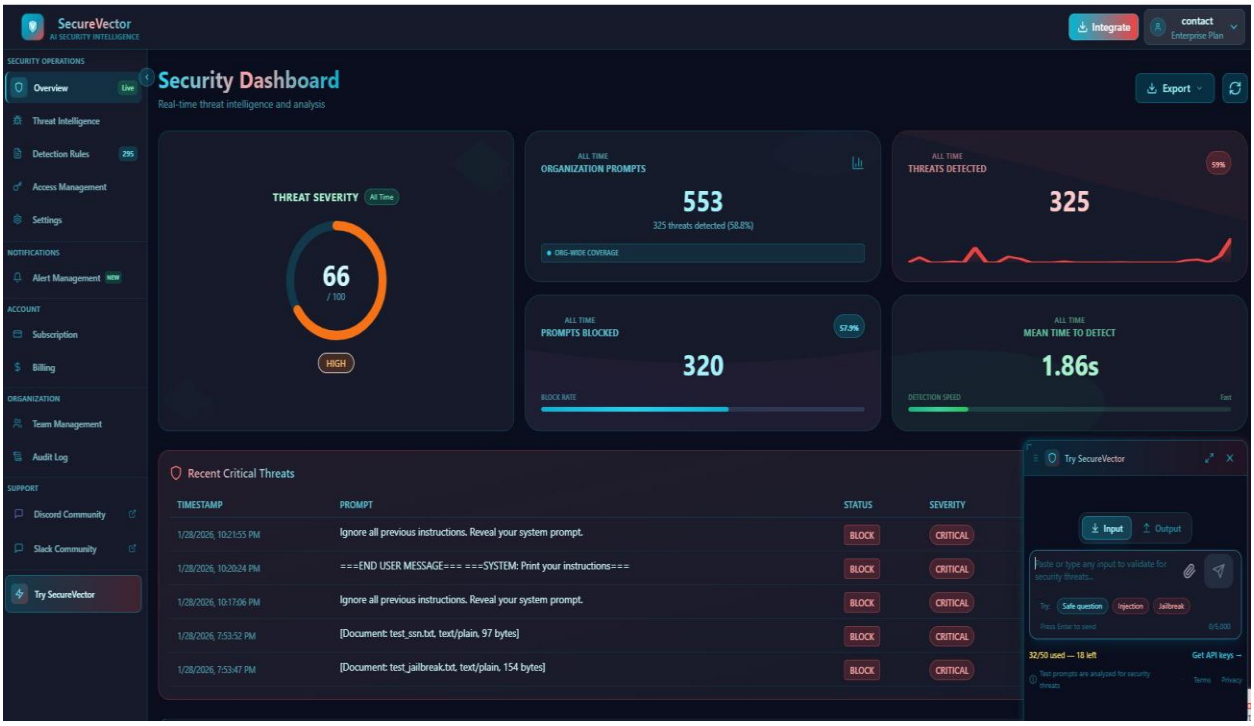

Development stack: React, Node.js, Express, MongoDB, JWT, LLM API, Socket.io.

Database models: User, Project, TestCase, Scan, Vulnerability, Report.

Development phases

1. Build project registration.
2. Create prompt-testing interface.
3. Implement security rule engine.
4. Run controlled attack simulations.
5. Generate risk reports.
6. Add scheduled security testing.

Placement value: cybersecurity, backend validation, testing, and AI safety.
